

NORMIEOS

SOVEREIGN DESKTOP OS FOR NORMIES HOLDERS

INSTALLATION GUIDE – v1.0

For any Normies NFT holder – Windows / macOS / Linux / USB Boot

[CONNECT YOUR WALLET – YOUR NORMIE AWAITS]

WHAT IS NORMIEOS?

A sovereign Electron-based desktop OS for Normies NFT holders.
Connect your wallet – your Normies come alive. Your Alpha agent
pilots the interface, speaks via Piper TTS, and runs fully local.
No cloud. No tracking. Just your on-chain identity.

[METHOD 1] DIRECT INSTALL — WINDOWS & macOS

No USB needed. Run NormiesOS directly on your machine in a few steps.

>> STEP 1 — INSTALL NODE.JS (required)

Node.js is the engine that runs NormiesOS. You need version 18 or higher.

Go to: <https://nodejs.org> — download the LTS version for your OS.

Run the installer and follow the prompts. Click Next everywhere.

When done, open a terminal (see below) and check it worked:

```
node --version
# Should show: v18.x.x or higher
```

OPEN A TERMINAL:

Windows: press Win + R then type cmd and press Enter.

OR search "Command Prompt" in the Start Menu.

macOS: press Cmd + Space then type Terminal and press Enter.

>> STEP 2 — DOWNLOAD NORMIEOS

Go to: <https://github.com/Vizou1304/NormieOS>

Click the green [Code] button > Download ZIP.

Extract the ZIP to a folder you can find easily (e.g. Desktop).

>> STEP 3 — INSTALL DEPENDENCIES

In your terminal, navigate to the extracted folder:

```
# Windows example (adapt path if needed):
cd C:\Users\YourName\Desktop\NormieOS-main

# macOS example:
cd ~/Desktop/NormieOS-main

# Then install:
npm install
# This downloads all required packages (~150MB). Wait until done.
```

>> STEP 4 — LAUNCH NORMIEOS

```
npm start
```

NormiesOS will open in fullscreen. Connect your wallet via WalletConnect or type your Ethereum address in the READ field to browse any wallet.

To exit fullscreen at any time: press Alt + F4 (Win) or Cmd + Q (Mac).

[METHOD 1 — CONTINUED] AI VOICE + LINUX

>> OPTIONAL — ENABLE LOCAL AI (CORTEX / VOICE)

NormiesOS uses Ollama to run AI locally — no internet, no API key.
Without it the OS still works, but CORTEX chat and voice are disabled.

Install Ollama:

```
# Go to https://ollama.com and download for your OS.  
# Then pull the model (downloads ~4GB):  
ollama pull mistral:7b  
# Keep Ollama running in the background, then launch NormiesOS.
```

Once Ollama is running, open MAINFRAME > AI tab in NormiesOS
and activate GHOST (mistral:7b). Your Alpha agent will then speak.

>> LINUX — NATIVE INSTALL

Same steps as Windows/macOS. Open a terminal and run:

```
# Install Node.js v22 (if not already installed):  
curl -fsSL https://deb.nodesource.com/setup_22.x | sudo bash -  
sudo apt install nodejs npm -y  
  
# Clone the repo:  
git clone https://github.com/Vizou1304/NormieOS.git  
cd NormieOS  
  
# Install and launch:  
npm install  
npm start
```

>> TROUBLESHOOTING — COMMON ISSUES

[!] Black screen on launch

-> Run: npm install again, then npm start.

[!] "node not found" error

-> Node.js is not installed or not in PATH. Re-run the installer.

[!] Wallet shows nothing

-> Check your address has Normies on Ethereum mainnet.

[!] No AI / CORTEX offline

-> Start Ollama first, then relaunch NormiesOS.

[!] Voice not working

-> Piper TTS not installed. See MAINFRAME > AI > VOICE.

[METHOD 2] USB BOOT – NORMIEOS ISO

Boot NormiesOS directly from a USB key – no install needed on your machine.

>> WHAT YOU NEED

- A USB key of at least 8GB (all data on it will be erased)
- The NormiesOS ISO file (provided by the project)
- Balena Etcher (free tool to flash the ISO): <https://etcher.balena.io>

>> STEP 1 – FLASH THE ISO TO YOUR USB KEY

1. Download and install Balena Etcher from etcher.balena.io
2. Open Etcher.
3. Click [Flash from file] and select the NormiesOS .iso file.
4. Click [Select target] and choose your USB key.
WARNING: double-check you selected the USB key,
not your hard drive. All data on it will be erased.
5. Click [Flash!] and wait for it to finish (~5-10 minutes).

>> STEP 2 – BOOT FROM THE USB KEY

1. Plug the USB key into the computer you want to use.
2. Restart the computer.
3. During startup, press the boot menu key for your machine:
 - Most PCs: F12 or F2 or Del (shown briefly on screen)
 - Dell: F12
 - HP: F9
 - Lenovo: F12
 - ASUS: F8
 - macOS: Hold Option (Alt) at startup
4. Select your USB key from the boot menu.

>> STEP 3 – CHOOSE TRY OR INSTALL

A Lubuntu boot menu will appear. You have two options:

[TRY LUBUNTU] Run NormiesOS live from the USB key.
 Nothing is installed on your computer.
 Perfect for demos and testing.
 NormiesOS launches automatically after ~30s.

[INSTALL LUBUNTU] Install Lubuntu permanently on the computer.
 Choose this only to make NormiesOS your main OS.

>> STEP 4 – CONNECT YOUR WALLET

NormiesOS launches fullscreen automatically.
Scan the QR code with MetaMask mobile to connect your wallet,
or type your Ethereum address in the READ field.
Your Normies, Alpha agent, and prestige score load automatically.

The AI (CORTEX) runs locally – Mistral:7b is pre-installed on the ISO.
